To Whom It May Concern,

Re: Testimonial – Lufter Sdn Bhd (Lufter)

I have known Mr Simon Loh, the founding member and owner of Lufter since 2010. He was involved in the reconstruction of the IVF laboratory in Sunway Medical Centre. His team showed good analytical skills and proceeded to rectify the teething problems that was affecting the function of the IVF laboratory then.

When Sunfert International Fertility Centre relocated to Bangsar South, Kuala Lumpur in 2014, Lufter was engaged to construct a brand new state-of-the-art IVF clean room laboratory conforming to ISO 7. The design of the laboratory and the selection of build material was done in consultation with Mr Simon and his team. The entire clean room complex of about 3500 sqf was constructed according to schedule. The team was absolutely professional and dealt with variations in the design and built without any issues. His team of subcontractors also conform to the high standards that he imposed.

The end result was an excellent, stable and validated clean room complex which complies to the strict standards and quality control of the Sunfert team. The build quality is excellent. Our IVF pregnancy rates are among the highest in the region, which is a testimony of an excellent lab environment.

Lufter was also commissioned to construct the IVF Laboratory and Clean Room Complex in the Ipoh branch. The project was also completed without a hitch.

Lufter continued to provide excellent and responsive after sale services which included a quick response time if we face any issues. They also provide reliable Periodic Preventive Maintenance (PPM).

I would not hesitate to recommend Lufter to any companies wishing to construct a good IVF laboratory.

Yours Sincerely,

.....
Dr Wong Pak Seng
Managing Director
Sunfert International Fertility Centre
